

Bugs-O-Copter Activity

Name _____
Date _____ ID _____

The purpose of this activity is to develop your observational skills and to introduce you to my expectations when you write a report in this class. You will cut out bugcopters and observe the flights of the bugcopters as certain parameters are changed. You will record your observations and write a report about how changes in the bugcopter affect the flight of the bugcopter.

But before we start, there are some terms that you are going to have to know. Look these up in a dictionary and then write the definitions in your own words. Give two examples for each type of observation.
